Extracto

I started programming 2 years ago because my dad's private garage needed softwares to manage the vehicles per hour and monthly. I have learned programming by practising a lot and being self-taught. First, I learned python but then I wanted to study React Js. Later, I started a full stack course in Coderhouse and finished the frontend part. Now I'm doing the backend one but I'm looking to gain experience as a freelancer and be a full stack developer.
